THIRTEENTH EDITION
SECOND PRINTING
JUNE 1940
FORM 165-1

It is the responsibility of the user to determine whether any use of the data or circuits presented in this booklet constitutes infringement of any patent, and no liability or obligation of any kind is assumed by Raytheon with respect to such use.

Each tube sold by Raytheon is licensed only to the extent of the notice which accompanies the tube.

RAYTHEON PRODUCTION CORPORATION
55 Chapel St. Newton, Mass.
420 Lexington Ave. New York, N.Y.
445 Lake Shore Drive Chicago, Ill.
1045 Bryant St. San Francisco, Cal.
415 Peachtree St., NE Atlanta, Ga.

BEFORE USING THIS CHART

Please read the following notes carefully. They explain the symbols and abbreviations which are used.

A new system for describing the type of base and for referring to the base connection diagram is used in the column headed "Basing Data".

The symbol at the left of the hyphen refers to the base connection diagram.

The symbol at the right of the hyphen indicates the type of base and the number of contact pins in accordance with the following:

First Letter- O=Octal Base
L=Locking Base
S=Standard Base

Second Letter- M=Medium Shell (bakelite)
S=Small Shell (bakelite)
W=Wafer Base (metal tube or bantam tube
with metal shell)
GT=Intermediate (bantam) shell (bakelite)

Numeral indicates the number of pins in base.

"B" after numeral indicates bayonet pin in base.

Examples:

4C-SS4B Diagram 4C, standard small shell with bayonet, 4 pin.
6G-SM6 Diagram 6G, standard medium shell, 6 pin.
7Q-OW7 Diagram 7Q, octal wafer base, 7 pin.

The column headed "Max Size View" shows the number of the tube outline drawing which gives dimensions. Although the letter in the symbol is arbitrarily chosen, the number refers to the bulb size. Thus 14C means that the tube has a size 14 bulb and that its outline drawing and dimensions are given in the "C" drawing for size 14 bulbs. Since the unit of bulb size is 1/8", a size 14 bulb is nominally 1 3/4", at its largest diameter.

* Indicates that capacitance is measured with standard tube shield connected to cathode. In the case of a metal type, the metal shell is connected to cathode.

"C" after figure in "Mutual Conductance" column indicates that value is for conversion transconductance. (Used for converter types only.)

"S" after figure in "Plate Volts" column indicates that value shown is anode supply voltage and that it is applied through the indicated value of G_2 resistor. (Also used only for converter types.)

Capacities shown for converter types are for the mixer section only.

Values of Plate Ma., Screen Ma., and Output Watts for push-pull operation are for two tubes and value of load resistance is from plate to plate.

Values of Grid Volts for filament type tubes are measured from the negative filament terminal.

Values of Cutoff Bias are approximate.

THE FOLLOWING TYPES ARE FOR USE IN BATTERY OPERATED RECEIVERS USING 2 VOLT TUBES WITH FILAMENTS IN PARALLEL.

TYPE	TOTAL CURRENT DRAIN OF TUBES ma	NUMBER	REMARKS
1A1	500	2	
1B1	360	2	
NB1	300	2	ALL NB TYPES USE BASING DIAGRAM INDICATED TOGETHER WITH DEVELOPED BASE VIEW. DEPENDING UPON THE WAY IN WHICH IT IS INSERTED IN THE SPECIAL 3-KEYWAY OCTAL SOCKET, AN NB TYPE MAY BE USED WITH SETS OBTAINING FILAMENT SUPPLY FROM EITHER A DRY PACK, AIR CELL BATTERY OR STORAGE BATTERY. COMPLETE DATA AND APPLICATION INFORMATION IS AVAILABLE UPON REQUEST.
NB2	360	2	
NB3	420	2	
NB4	480	2	
NB5	540	2	
NB6	600	2	
NB7	660	2	
NB8	720	2	

*PANEL LAMPS TO BE USED WITH THESE PLUG-IN RESISTORS MUST HAVE THE CURRENT RATING SHOWN. THE ACTUAL TYPE WILL DEPEND UPON THE TYPE OF BASING REQUIRED AND MAY BE OBTAINED FROM THE PANEL LAMP DATA IN THIS CHART.

†PILOT LAMP WIRING MAY REQUIRE SLIGHT CHANGE.

†When the filament supply will stand one ampere additional drain.

**When both power tubes are changed together.

*This type made as a tetrode and as a pentode.

#Replacement may require the addition of a shield can.

ΔReplacement satisfactory in parallel filament circuits. In series circuits provisions must be made to supply proper filament or heater current.

Raytheon, World's Largest Exclusive Manufacturer of Radio Tubes, has for many years been accredited with publishing the most constructive and complete Receiving Tube Data Chart made available to the Radio Trade.

The Sales Promotion Department sincerely believes the user will find this new edition possesses even higher standards than previous issues and is not only helpful but a real necessity to Radio Technicians, Experimenters, and All Others Concerned in the maintenance of Radio Apparatus.

The Sales Promotion Department also hopes the user will be reminded of the uniformly high quality of Raytheon Tubes maintained through the many years, and will favor the Raytheon Tube Distributor in his area when radio tubes are needed. Each Distributor has been selected for ability to serve the Radio Trade with a *complete line of all types* of Raytheon Tubes and is prepared to meet your most exacting requirements.

The Raytheon Data Chart is only one of the many Service and Sales Helps available to the Trade. For complete information, consult the nearest Raytheon office, or, better still, your nearest Raytheon Distributor.

In this new edition of the Raytheon Characteristic Data Chart, there has been included a considerable amount of information not appearing in the preceding editions. A multitude of new tube types have been introduced and these are listed in proper RMA sequence with their essential features and operating characteristics. For each of the active tube types listed there is given complete information on the base connections and in addition the size and type of base. There is also given for each tube type the bulb style and size, and the outline dimensions of the complete tube.

The Interchangeable Tube Section has been made complete to the extent that it includes all obsolete types for which interchangeable types are available.

With these additions, this chart contains a useful and compact summary of the essential information on American receiving tubes. It has been designed for radio servicemen, radio dealers, receiver engineers, and all others who have to do with the application of radio receiving tubes. The number of tube types has become so great that a simple wall chart is no longer practicable. The present booklet form has been chosen as being most convenient for general use. Holes have been provided so that this booklet maybe easily mounted on the wall by rings for use as a wall chart or inserted in a loose leaf notebook for bench or desk use.
