

How to upgrade the security of your digital jukebox from NSM Music Inc.

Your new digital wall-box is factory fitted with a standard push-lock that provides adequate security against opportunistic attacks on the cash-box. However, you may wish to have the reassurance of a much lower risk of thefts by crooks using counterfeit keys. This can be achieved simply and economically by retrofitting a higher security lock.

The G8990 from Camlock Systems

In addition to offering thousands of key combinations, this push-lock also offers key assignment, greatly reducing the possibility of unauthorised duplicate keys being obtained. The procedure involves assigning a unique key combination to the purchaser, recording this person's details and using this information to verify all orders for additional locks and keys. In addition, Camlock's G8990 is easy to retrofit. Call our friendly team to start enjoying much higher security.
